PROFILE

Second-year Computing Technologies student looking for a 12-month placement in software, web development or IT from summer 2027. I build and maintain the website for a radio station in Newry and a Flask app its presenter uses on air. I have also worked part-time alongside my studies since 2021.

EDUCATION

BSc (Hons) Computing Technologies, Ulster University, Belfast 2025 – 2029 (expected)
Includes a placement year in 2027/28. Year 2 modules: Java programming; Python with Flask and SQLAlchemy; an Agile team project in a team of five; placement preparation.

Level 3 Extended Diploma in Technology, Southern Regional College, grade D*DD 2022 – 2024

IT Specialist: HTML and CSS, Certiport May 2023

PROJECTS

Coast Internet Radio, coastinternetradio.com May 2026 – present, rebuilt Oct 2026

- Built and maintain the website for a small internet radio station run by a family member, for older listeners who are not very confident with technology.
- Set up Netlify hosting and two Cloudflare Workers so the station's HTTP-only stream and track information play on the HTTPS site.
- A live player that keeps playing between pages, now playing with album covers, and an editor where the presenter changes words, photos, colours and show times himself, with preview, publish and undo.
- Netlify Functions and Blobs, a hashed password, a signed sign-in cookie and 24 tests that run before each deploy.
- Wrote the first version using online tutorials, class notes and AI tools. I wrote and tested much of the code while AI helped me make complex code more understandable and get through errors quickly, then committed and deployed the changes.

Coast Requests, github.com/JamieP-205/coast-requests Oct 2026 – present

- Flask app that collects song requests from the Coast website, sent as signed Netlify webhooks, into one list for live shows.
- Python, Flask, SQLAlchemy and SQLite, with CSRF protection and 23 pytest tests on GitHub Actions. I wrote and tested much of the code while AI helped me make complex code more understandable and get through errors quickly, then deployed it.

Portfolio website, jamie-parr.jamieparr05.workers.dev Nov 2026 – present

- Static site on Cloudflare Workers with case studies of my projects. The content is kept in Markdown and JSON files and edited through a browser-based CMS.

TECHNICAL SKILLS

Used in projects: HTML, CSS, JavaScript, Node.js, Python, Flask, SQLAlchemy, SQLite, Git and GitHub, GitHub Actions, Netlify, Cloudflare Workers, pytest, Playwright

WORK EXPERIENCE

Temporary Production Operative, Saica Pack UK Jun 2026 – Sep 2026

- Ran and monitored automated packaging machinery and dealt with routine faults and stoppages safely.

Warehouse Operative, Pet Connection Oct 2021 – Jul 2026

- Prepared customer and Amazon orders for dispatch and kept stock organised, alongside my studies.

Kitchen Porter, The Garden Room Aug 2024 – Jul 2026

- Supported the kitchen team through busy services, keeping work areas clean and hygienic.

Floor Staff, No.7 Duke Jun 2022 – Sep 2022

- Helped customers with queries, kept the service area tidy and prepared areas for events and service.
